Title: US-10-006-922A-12-COPY
Perfect score: 1214
Sequence: 1 MRSSKNVIKEFMRFKVRMEG.....EDYTIVEQYERTEGRHHLFL 225

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 5 seqs, 1154 residues

Total number of hits satisfying chosen parameters: 5

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 45 summaries

Database : new.pep:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

L3 ANSWER 1 OF 5 HCAPLUS COPYRIGHT 2006 ACS on STN
TI cDNAs encoding chromo/fluoroproteins from non-bioluminescent
Cnidarian species or non-Pennatulacean
(sea pen) species and their use
AB Nucleic acid compns. encoding novel chromo/fluoroproteins and mutants
thereof, as well as the proteins encoded the same, are provided. The
proteins of interest are proteins that are colored and/or fluorescent,
where this feature arises from the interaction of two or more residues of
the protein. The subject proteins are further characterized in that they
are either obtained from non-bioluminescent Cnidarian, e.g.,
Anthozoan, species or are obtained from Anthozoan
non-Pennatulacean (sea pen) species. More specifically,
they include GFP of Heteractis crispa, Dendronephthya sp, Scolymia
cubensis, Ricordea florida, Montastraea cavernosa, Condylactis gigantea,
Agaricia fragilis, sequence homolog of Montrastraea annularis and RFP of
Zoanthus sp., Ricordea florida, and Montastraea cavernosa. Also of
interest are proteins that are substantially similar to, or mutants of,
the above specific proteins. Also provided are fragments of the nucleic
acids and the peptides encoded thereby, as well as antibodies to the
subject proteins and transgenic cells and organisms. The subject protein
and nucleic acid compns. find use in a variety of different applications.
Finally, kits for use in such applications, e.g., that include the subject
nucleic acid compns., are provided.

L3 ANSWER 2 OF 5 HCAPLUS COPYRIGHT 2006 ACS on STN
 TI cDNA and protein sequences of novel chromo/fluoroproteins from
 non-bioluminescent Cnidarian species or are obtained
 from non-Pennatulacean (sea pen) species and methods
 for using the same
 AB Nucleic acid compns. encoding novel chromo/fluoroproteins and mutants
 thereof, as well as the proteins encoded by the same, are provided. The
 subject proteins of interest are proteins that are colored and/or
 fluorescent, where this feature arises from the interaction of two or more
 residues of the protein. The subject proteins are further characterized
 in that they are either obtained from non-bioluminescent Cnidarian, e.g.,
 Anthozoan, species or are obtained from non-
 Pennatulacean (sea pen) species. Specific proteins of interest
 include proteins obtained from the following specific Anthozoan
 species: Anemonia majano (NFP-1), Clavularia sp. (NFP-2), Zoanthus sp.
 (NFP-3 & NFP-4), Discosoma striata (NFP-5), Discosoma sp. "red" (NFP-6),
 Anemonia sulcata (NFP-7), Discosoma sp "green" (NFP-8), and Discosoma sp.
 "magenta" (NFP-9). Also of interest are proteins that are substantially
 similar to, or mutants of, the above specific proteins. Also provided are
 fragments of the nucleic acids and the peptides encoded thereby, as well
 as antibodies to the subject proteins and transgenic cells and organisms.
 The subject protein and nucleic acid compns. find use in a variety of
 different applications. Finally, kits for use in such applications, e.g.,
 that include the subject nucleic acid compns., are provided.

L3 ANSWER 3 OF 5 USPATFULL on STN

TI Rapidly maturing fluorescent proteins and methods for using the same
 AB Nucleic acid compositions encoding rapidly maturing fluorescent proteins, as well as non-aggregating versions thereof (and mutants thereof) as well as the proteins encoding the same, are provided. The proteins of interest are proteins that are fluorescent, where this feature arises from the interaction of two or more residues of the protein. The subject proteins are further characterized in that, in certain embodiments, they are mutants of wild type proteins that are obtained either from non-bioluminescent Cnidarian, e.g., Anthozoan, species or are obtained from Anthozoan non-Pennatulacean (sea pen) species. In certain embodiments, the subject proteins are mutants of wild type Discosoma sp. "red" fluorescent protein. Also of interest are proteins that are substantially similar to, or mutants of, the above specific proteins. Also provided are fragments of the nucleic acids and the peptides encoded thereby, as well as antibodies to the subject proteins and transgenic cells and organisms. The subject protein and nucleic acid compositions find use in a variety of different applications. Finally, kits for use in such applications, e.g., that include the subject nucleic acid compositions, are provided.

L5 ANSWER 1 OF 11 WPIDS COPYRIGHT 2006 THE THOMSON CORP on STN

TI Novel nucleic acid encoding a rapidly maturing chromo- or
fluorescent mutant of a Cnidarian chromo- or fluorescent
protein or its mutant, useful for applications involving chromo- or
fluorescent proteins.

AN 2003-569236 [53] WPIDS

AB WO2003054158 A UPAB: 20030820

NOVELTY - A nucleic acid (I) that encodes a rapidly maturing chromo or
fluorescent mutant of a Cnidarian chromo- or fluorescent
protein or its mutant, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for:

- (1) a fragment (II) of (I);
- (2) a construct (III) comprising a vector and (I);
- (3) an expression cassette (IV) comprising, a transcriptional
initiation region functional in an expression host, (I), or (II), and a
transcriptional termination region functional in the expression host;
- (4) a cell (V), or its progeny, comprising (IV) as part of an
extrachromosomal element or integrated into the genome of a host cell as a
result of introduction of the expression cassette into the host cell;
- (5) a protein (VI) or its fragment encoded by (I);
- (6) an antibody (VII) binding specifically to (VI);
- (7) a transgenic cell or its progeny, or a transgenic organism
comprising a transgene that is (I) or (II); and
- (8) a kit comprising (I) or (II).

USE - (I) is useful in applications involving nucleic acid encoding a
chromo- or fluorescent protein. (V) is useful for producing a
chromo and/or fluorescent protein which involves growing the
cell, whereby the protein is expressed, and isolating the protein
substantially free of other proteins. (VI) is useful in applications
involving chromo- or fluorescent protein (claimed).

(I) is useful as PCR primers, hybridization probes, etc. The
expression cassettes are useful for synthesizing (VI). The chromoproteins
are useful as coloring agents which are capable of imparting color or

pigment to a particular composition of matter e.g. food compositions, pharmaceuticals, cosmetics, living organisms, e.g., animals and plants. The chromoproteins may also find use as labels in analyte detection assays, e.g. assays for biological analytes of interest and as selectable markers in recombinant DNA applications, e.g. the production of transgenic cells and organisms. The fluorescent proteins find use in a variety of different applications, e.g. in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescent reporting groups by using microscopic imaging and electronic analysis, as second messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins also find use in protease cleavage assays. The proteins can also be used in assays to determine the phospholipid composition in biological membranes and as a fluorescent timer.

 TI cDNAs encoding chromo/fluoroproteins from non-bioluminescent
 Cnidarian species or non-Pennatulacean (sea pen) species
 and their use
 AB Nucleic acid compns. encoding novel chromo/fluoroproteins and mutants
 thereof, as well as the proteins encoded the same, are provided. The
 proteins of interest are proteins that are colored and/or
 fluorescent, where this feature arises from the interaction of two
 or more residues of the protein. The subject proteins are further
 characterized in that they are either obtained from non-bioluminescent
 Cnidarian, e.g., Anthozoan, species or are obtained from Anthozoan
 non-Pennatulacean (sea pen) species. More specifically, they include GFP
 of Heteractis crispa, Dendronephthya sp, Scolymia cubensis, Ricordea
 florida, Montastraea cavernosa, Condylactis gigantea, Agaricia fragilis,
 sequence homolog of Montrastraea annularis and RFP of Zoanthus sp.,
 Ricordea florida, and Montastraea cavernosa. Also of interest are
 proteins that are substantially similar to, or mutants of, the above
 specific proteins. Also provided are fragments of the nucleic acids and
 the peptides encoded thereby, as well as antibodies to the subject
 proteins and transgenic cells and organisms. The subject protein and
 nucleic acid compns. find use in a variety of different applications.
 Finally, kits for use in such applications, e.g., that include the subject
 nucleic acid compns., are provided.

L5 ANSWER 3 OF 11 HCAPLUS COPYRIGHT 2006 ACS on STN

TI cDNA and protein sequences of novel chromo/fluoroproteins from non-bioluminescent Cnidarian species or are obtained from non-Pennatulacean (sea pen) species and methods for using the same

AB Nucleic acid compns. encoding novel chromo/fluoroproteins and mutants thereof, as well as the proteins encoded by the same, are provided. The subject proteins of interest are proteins that are colored and/or fluorescent, where this feature arises from the interaction of two or more residues of the protein. The subject proteins are further characterized in that they are either obtained from non-bioluminescent Cnidarian, e.g., Anthozoan, species or are obtained from non-Pennatulacean (sea pen) species. Specific proteins of interest include proteins obtained from the following specific Anthozoan species: Anemonia majano (NFP-1), Clavularia sp. (NFP-2), Zoanthus sp. (NFP-3 & NFP-4), Discosoma striata (NFP-5), Discosoma sp. "red" (NFP-6), Anemonia sulcata (NFP-7), Discosoma sp "green" (NFP-8), and Discosoma sp. "magenta" (NFP-9). Also of interest are proteins that are substantially similar to, or mutants of, the above specific proteins. Also provided are fragments of the nucleic acids and the peptides encoded thereby, as well as antibodies to the subject proteins and transgenic cells and organisms. The subject protein and nucleic acid compns. find use in a variety of different applications. Finally, kits for use in such applications, e.g., that include the subject nucleic acid compns., are provided.

TI Non aggregating fluorescent proteins and methods for using the
same
AB Nucleic acid compositions encoding non-aggregating chromo/fluoroproteins
and mutants thereof, as well as the proteins encoded by the same, are

provided. The proteins of interest are polypeptides that are non-aggregating colored and/or fluorescent proteins, where the non-aggregating feature arises from the modulation of residues in the N-terminus of the protein and the chromo and/or fluorescent feature arises from the interaction of two or more residues of the protein. Also provided are fragments of the subject nucleic acids and the peptides encoded thereby, as well as antibodies to the subject proteins and transgenic cells and organisms. The subject protein and nucleic acid compositions find use in a variety of different applications. Finally, kits for use in such applications, e.g., that include the subject nucleic acid compositions, are provided.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

TI Rapidly maturing fluorescent proteins and methods for using the same

AB Nucleic acid compositions encoding rapidly maturing fluorescent proteins, as well as non-aggregating versions thereof (and mutants thereof) as well as the proteins encoding the same, are provided. The proteins of interest are proteins that are fluorescent, where this feature arises from the interaction of two or more residues of the protein. The subject proteins are further characterized in that, in certain embodiments, they are mutants of wild type proteins that are obtained either from non-bioluminescent Cnidarian, e.g., Anthozoan, species or are obtained from Anthozoan non-Pennatulacean (sea pen) species. In certain embodiments, the subject proteins are mutants of wild type Discosoma sp. "red" fluorescent protein. Also of interest are proteins that are substantially similar to, or mutants of, the above specific proteins. Also provided are fragments of the nucleic acids and the peptides encoded thereby, as well as antibodies to the subject proteins and transgenic cells and organisms. The subject protein and nucleic acid compositions find use in a variety of different applications. Finally, kits for use in such applications, e.g., that

include the subject nucleic acid compositions, are provided.

TI Kindling fluorescent proteins and methods for their use
AB Kindling fluorescent protein compositions and nucleic acids
encoding the same, as well as methods for using the same, are provided.
The kindling fluorescent proteins are characterized in that
they become brightly fluorescent proteins, from an initial
non-fluorescent or low fluorescent state, upon
exposure to a kindling stimulus, which fluorescent state may
be reversible or irreversible. The subject protein/nucleic acid
compositions find use in labeling protocols, e.g., in labeling proteins,
organelles, cells and organisms, etc., in a variety of different types
of applications. Also provided are systems and kits for use in
practicing such applications.

provided. The subject proteins of interest are proteins that are colored
and/or fluorescent, where this feature arises from the
interaction of two or more residues of the protein. The subject proteins
are further characterized in that they are either obtained from
non-bioluminescent Cnidarian, e.g., Anthozoan, species or are obtained
from non-Pennatulacean (sea pen) species. Specific proteins of interest
include proteins obtained from the following specific Anthozoan species:
Anemonia majano (NFP-1), Clavularia sp. (NFP-2), Zoanthus sp. (NFP-3 &
NFP-4), Discosoma striata (NFP-5), Discosoma sp. "red" (NFP-6), Anemonia
sulcata (NFP-7), Discosoma sp "green" (NFP-8), and Discosoma sp.
"magenta" (NFP-9). Also of interest are proteins that are substantially
similar to, or mutants of, the above specific proteins. Also provided
are fragments of the nucleic acids and the peptides encoded thereby, as
well as antibodies to the subject proteins and transgenic cells and
organisms. The subject protein and nucleic acid compositions find use in
a variety of different applications. Finally, kits for use in such
applications, e.g., that include the subject nucleic acid compositions,
are provided.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

ACCESSION NUMBER: 2002:343950 USPATFULL
TITLE: Novel chromophores/fluorophores and methods for using
the same
